

CygniSENSE Motion

"Hand Assessment and Active Rehabilitation based on depth & tracking technologies"

ABOUT CygniSENSE Motion

CygniSENSE Motion aspires to encourage independence in patient therapy with technology and further provide data for assessments.

Through motion depth and tracking technologies, **CygniSENSE Motion** allows patients to explore their range of motion through various programmes such as games or repetitive exercises.

Games

Exercises

Assessment

Platform

Depth & Tracking Device

EXERCISE AND GAME SELECTION

Multiple game and exercise selections, categorised based on specific hand functional positions or cognitive training.

Encourage patients to actively engage in their training exercises as they continue to go through therapy with a variety of games to choose from.

GAME FOR MOTIVATION

ANIMATED GAMES 01

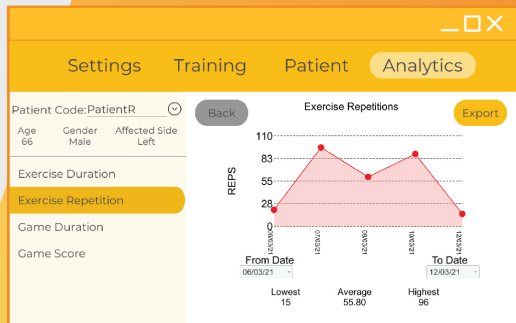

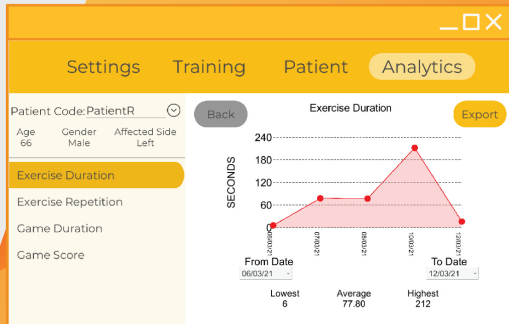

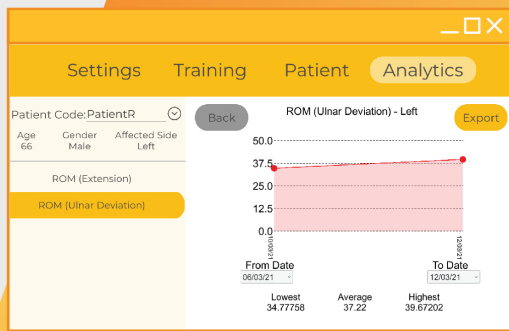

Animated games coupled with visual effort meters aim to provide visual motivation as patients enjoy the games.

VISUAL MOTIVATION 02

Visually engaging, interactive and encouraging!

ANALYTICS

Graphical reports on training intensity, duration and performance available at the end of the therapy session.

Reports may boost patient's determination to set up goals and assist therapists in tracking and monitoring patient's progress.
